

OSHER BOUDARA

Senior Data Scientist | Full-Stack Applied AI Engineer
osherboudara99@gmail.com | 818.809.4261 | osherboudara.com | [LinkedIn](#) | [GitHub](#)

EXPERIENCE

Cognizant - *Senior Associate Data Scientist (Promoted from Associate May 2025)*

Aug. 2022 - Present

- Lead end-to-end data science and AI initiatives for the Crop Science division of a Fortune 500 client, supporting global stakeholders across problem scoping, data engineering, MLOps, cloud infrastructure (AWS/GCP), and production delivery.
- Built full-stack, agentic GCP applications supporting enterprise cloud migration, including an Intake Concierge serving as the centralized intake and registry platform for automated project scoping, feasibility assessment, and requirements gathering; an LTO Hub RAG assistant over 500+ access-controlled SharePoint documents; and a Crop Protection Labeler that analyzes uploaded herbicide and pesticide label images to provide safe product-use recommendations, supporting regulatory compliance and mitigating legal risk.
- Developed Python/Google ADK/Vertex AI backends, React TypeScript frontends, Cloud SQL/GCS/RAG Engine integrations, Terraform/Kubernetes/Artifact Registry deployment workflows, and Opik-based telemetry and evaluation.
- Built an agentic competitive intelligence platform leveraging LLMs and RAG to analyze competitor financials, strategic shifts, and organizational investment trends; integrated LangGraph agents with an existing AWS-hosted document retrieval layer and developed LLM-driven hiring and headcount analyses to generate actionable insights.
- Developed a customizable FastAPI/Pydantic framework around the DSSAT crop simulation model, scaling from ad hoc analyses to large-scale simulations across years, geographies, and climate scenarios by integrating diverse weather and soil datasets to project yield, emissions, and agro-management outcomes through 2100, informing long-term crop lifecycle recommendations adopted by multiple teams and growers.
- Led crop mega-environment analysis across EMEA, engineering phenological features from GDD-based calculations and applying unsupervised clustering to identify climate-driven shifts; delivered geospatial and feature-distance visualizations highlighting key drivers of mega environment shifts.
- Built a global climate ensemble dataset from multiple NetCDF weather projections using spatial and temporal interpolation, storing raw data in S3 and analytics-ready outputs in BigQuery.
- Delivered the Market Share Forecast tool employing data science techniques and MLOps, yielding unprecedented insights into market share shifts and their key drivers.

Hoffman Brothers Realty - *Python Developer*

Jan. 2022 - Dec. 2022

- Built Python and AWS (Lambda, EventBridge, S3) workflows to automate application ingestion and Airtable analytics, saving thousands of dollars in monthly labor costs and surfacing operational insights.

Cherre - *Data Engineer Intern*

May 2021 - Aug. 2021

- Built repeatable SQL workflows and analytics pipelines on GCP (BigQuery, GCS, Data Studio), enabling data lineage analysis and scalable reporting.

SKILLS

- Technical Skills: Python, SQL (PostgreSQL, MySQL, BigQuery), AWS, GCP, Agent Engine (Vertex AI), LLMs, RAG, Agentic AI, MLOps, Terraform, Kubernetes, React, TypeScript, Git
- Certifications: AWS Solutions Architect Associate, Microsoft AZ-900, Machine Learning Specialization (U. of Wash.)

EDUCATION

California State University, Northridge (CSUN) - B.S. Computer Science, Minor in Statistics, May 2022

Los Angeles Valley College (LAVC) - A.S. Mathematics, June 2020
