

OSHER BOUDARA

Senior Data Scientist | Full Stack Applied AI Engineer

osherboudara99@gmail.com | 818.809.4261 | osherboudara.com | [LinkedIn](#) | [GitHub](#)

EXPERIENCE

Cognizant - Senior Associate Data Scientist (Promoted from Associate May 2025)

Aug. 2022 - Present

- Lead end-to-end data science initiatives for the Crop Science division of a Fortune 500 client, supporting global stakeholders across problem scoping, data ingestion, ETL pipelines, MLOps, cloud infrastructure (AWS/GCP), and production delivery.
- Built full-stack, agentic GCP applications supporting enterprise cloud migration, including an Intake Concierge for project/POC feasibility assessment and registry management, an LTO Hub RAG assistant over access-controlled SharePoint content, and a Crop Protection Labeler using internal domain databases; developed Python/ADK/Vertex AI backends, React TypeScript frontends, Cloud SQL/GCS/RAG Engine integrations, and Terraform/Kubernetes/Artifact Registry deployment workflows for these various projects.
- Built an agentic competitive intelligence platform leveraging LLMs and RAG to analyze competitor financials, strategic shifts, and organizational investment trends; integrated LangGraph agents with an existing AWS-hosted document retrieval layer and developed LLM-driven hiring and headcount analysis to generate actionable insights.
- Developed a climate change impact and adaptation modeling tool, including a customizable crop lifecycle simulation framework projecting yield, environmental constraints, emissions, and optimal agro-management practices under future climate scenarios (globally through 2100), informing long-term business strategy.
- Led crop mega-environment analysis across EMEA, engineering phenological features from GDD-based calculations and applying unsupervised clustering to identify climate-driven shifts; delivered geospatial and feature-distance visualizations highlighting key drivers of change.
- Constructed a global ensemble climate change dataset by integrating multiple projected weather sources through NetCDF extraction, spatial/temporal interpolation, and aggregation, storing raw data in AWS S3 and analytics-ready datasets in BigQuery, enabling downstream modeling and Tableau-based visualization.
- Delivered the patentable Market Share Forecast tool employing data science techniques and MLOps for predictions, classification, and feature extraction — yielding unprecedented insights into market share shifts and their key drivers.

Hoffman Brothers Realty - Python Developer

Jan. 2022 - Dec. 2022

- Created automated workflows using Python and AWS (Lambda, EventBridge, S3), including ingestion of hundreds of applications weekly and EDA pipelines on Airtable data, reducing labor costs and uncovering operational insights.

Cherre - Data Engineer Intern

May 2021 - Aug. 2021

- Built repeatable SQL workflows and analytics pipelines on GCP (BigQuery, GCS, Data Studio), enabling data lineage analysis and scalable reporting.

SKILLS

- Technical Skills: Python, SQL (PostgreSQL, MySQL, BigQuery) , AWS, GCP, Azure, LLMs, RAG, Agentic AI, MLOps, Terraform, Kubernetes, React, TypeScript, Git
- Certifications: AWS SAA, AZ-900, Machine Learning Specialization (U. of Wash.),

EDUCATION

California State University, Northridge (CSUN) - B.S. Computer Science, Minor in Statistics, May 2022

Los Angeles Valley College (LAVC) - A.S. Mathematics, June 2020
